Pathology Billing Mistakes Cost You Money; ICD-10 Magnifies Current Mistakes

The good news: pathology and lab reimbursement in 2016 may actually increase (TC for some tests) or stay flat (most PC).

The bad news: the pressure to reduce testing and to reduce reimbursement hasn't gone away. And ongoing payer changes make keeping up difficult. Plus: **ICD-10 is here now!**

Is your billing able to keep up? We see many situations where labs and pathologists are "leaving money on the table." And ICD-10 will make this worse, perhaps much worse.

The most important question right now:

Are all of your ordering physicians providing you complete info for ICD-10?

ICD-10 Hotline and
Survival Kit!

Questions to assess your billing situation:

- Is every accession tracked?
- Are commercial payments compared to your contracted amount? Is your fee schedule current?
- Have you done coding review in the last 12 months?
- Is every denial worked? Do you know the top causes?

Can you answer each question "Yes"? If not, you are missing reimbursement dollars—perhaps a lot of \$.
