

# MEDCO FORUM<sup>®</sup>

PRESENTING INNOVATIVE PRODUCTS & SERVICES TO HEALTHCARE PROFESSIONALS

## Medco Forum Presents: AeroChamber Plus<sup>®</sup> Flow-Vu<sup>®</sup>

*The AeroChamber Plus<sup>®</sup> Flow-Vu<sup>®</sup> Valved Holding Chambers for metered dose inhalers (MDIs) offer effective dose delivery with an easy-to-clean design.*

The device incorporates the proprietary patented Flow-Vu<sup>®</sup> Indicator to signal proper inhalation and antistatic material that minimizes static adhesion of drug aerosol particles to the chamber walls. Together these features were designed to help ensure proper dosing. Additionally, the AeroChamber Plus Valved Holding Chambers are now dishwasher safe and come apart for easy cleaning.

The Flow-Vu Indicator, located conspicuously above the barrel of the chamber, provides a clear visual cue during inhalation that lets patients and caregivers know whether the chamber is sealed well enough against the face or around the lips to adequately deliver the medicine from the MDI.

A Full Line of BPA-Free Anti-static Valved Holding Chambers

The dishwasher safe AeroChamber Holding Chambers also come apart for easy cleaning. Residual bacterial and other pathogens from the respiratory tract remain a chronic concern with inhalers. The AeroChamber Plus Flow-Vu Holding Chambers disassemble and each part is dishwasher safe, enabling convenient and frequent washing.

The AeroChamber Plus Holding Chambers come with complete and easy-to-understand English and Spanish instructions for use that include graphics which clearly illustrate each step in the procedure.

**For more information about the  
AeroChamber Plus<sup>®</sup> Flow-Vu<sup>®</sup> Valved Holding Chambers,
