

Looking to Reduce Post-Op Contamination Risk?

In May 2017, the CDC published an [update](#) on Surgical Site Infections (SSI) Guidelines. SSI is touted as one of the costliest hospital-acquired infections and your post-operative dressing choice is a critical component of wound management and reducing the risk of SSI.

[ReliaTect® Post-Op Dressing with CHG](#) is an observational incision management tool that incorporates BeneHold™ CHG, an innovative adhesive technology from Vancive™ Medical Technologies to protect vulnerable incisions from contamination.

ReliaTect Post-Op Dressing with CHG offers:

- Antimicrobial properties of Chlorhexidine Gluconate (CHG)
- Transparency to allow monitoring without exposure
- Moisture management to promote ideal wound healing environment
- Waterproof to protect site so patients can bathe
