FDA News Release

FDA approves breath test for delayed gastric emptying

Test can be performed in a

Neurogastroenterol Motil. Author manuscript; available in PMC 2014 Jan 1.
Published in final edited form as:
Neurogastroenterol Motil. 2013 Jan; 25(1): 10.1111/nmo.12054
Published online 2012 Dec 6; doi: 10.1111/nmo.12054

Comprehensive Assessment of Gastric Emptying with a Stable ^{13}C -Labelled Meal

Test

Adil E. Bharucha, M.B.B.S., M.D., Michael Camilleri, M.D., Erica Veil, B.S., Duane Burton, M.D., Ph.D.

Now there's a faster, more direct path to diagnosis.

The Cairn ^{13}C -Spirulina Gastric Emptying Breath Test (GEBT)

is the only FDA-approved breath test to aid in the definitive diagnosis of gastroparesis.

Cairn's GEBT is a non-radioactive, non-invasive and easily administered test for measurement of the rate of gastric emptying in adults. Validated against the gold standard reference method of gastric scintigraphy, the Cairn GEBT enables rapid and accurate identification of gastroparesis and is available now.

PROVEN

FDA-approved and validated against scintigraphy

SAFE

No radiation exposure

TRUSTED

Breath samples analyzed in CLIA-certified lab

CONVENIENT

Easy to administer in a doctor's office

Request that we send you the
GEBT for a no cost evaluation
