

MEDCO FORUM[®]

PRESENTING INNOVATIVE PRODUCTS & SERVICES TO HEALTHCARE PROFESSIONALS

Medco Forum Presents:

DNA Repair and Stem Cell Growth Factors by Osmosis

Osmosis has patented a new technology in Catalyst, with SRGF-7™, it uses “zinc fingers” to repair cellular DNA. The result is a remarkable impact on several aspects of skin health: including sun damage repair, fading age spots, scar prevention/correction, repair of “broken” facial capillaries, and reversing other signs of aging.

Equally important to the skincare market is StemFactor Liposomal Growth Factor Serum. With its patent-pending formula, StemFactor uses over 150 liposome-coated growth factors harvested from adult stem cells to substantially improve the growth factors’ penetration to the dermis by 600 percent. It promotes healing, lightens hyperpigmentation and improves lines and elasticity.

Ben Johnson, M.D., who founded **Osmosis** in 2007 states “Osmosis MD is a collection of the best technology in skincare. Natural, paraben free, and yet highly corrective because of our focus on the dermis. Every **Osmosis** serum uses several fibroblast stimulators along with skin nutrition, scar revision and barrier restoration strategies.”

Osmosis Skincare physician-only products represent the most advanced skincare technology in the world and are available for private label.
