Women's Health Clearly Defined
F37 DIAGNOSTIC ULTRASOUND SYSTEM

4D SHADING – Renders the fetus with natural shadows and skin as though light is cast upon it. Allows for easier detection of fetal deformities.

SILKY IMAGE PROCESSING (SIP) – Reduces artifacts and noise and clarifies tissue borders, enabling easier observation.

ZOOM – Images can be zoomed in while maintaining a high frame rate. While moving the track-ball, the zoom box will also move. Once movement of the track-ball has stopped, zoom function will return automatically.

Purchase before
December 31st to
receive a tax credit!
