PRESENTING INNOVATIVE PRODUCTS & SERVICES TO HEALTHCARE PROFESSIONALS

You treat your patients.
We treat their homes.
Together we change lives.

EZ Breathe Healthy Home Solutions curing Sick Home Syndrome through air exchanges and pollutant removal for over 15 years.

"According to the Environmental Protection Agency, indoor air is often more than 10 times (and sometimes more than 100 times) more polluted than outdoor air. Indoor air pollutants contribute to asthma as well as other respiratory conditions and diseases. Indoor pollutants include VOCs (volatile organic compounds) from offgassing building materials, paints and finishes, and furnishes; other toxic chemicals emitted from cleaning products, pesticides, and hazardous household supplies; mold, which grows on moist materials and surfaces; carbon monoxide and nitrogen dioxide gases, which can be released from gas-fueled combustion appliances; particulates from wood-burning fireplaces or cars running near the house; tobacco smoke; as well as asbestos, lead, and radon." - US Green Building Council.

Independent indoor environmental testing indicate EZ Breathe affects homes:

- 79% reduction mold spores
- 82% reduction respirable particles
- Air exchanges 6-10 times daily
- Radon Reduction
- Moisture control

Providing asthma/allergy relief:

*"I was very skeptical at first of the rave reviews that the system had but I figured if it kept the moisture down and helped just a little with my kid's asthma then it would be worth it. We were installed at the very beginning of spring, the worst time of the year for my kid's, and to my surprise as the weeks turned into months my children showed very little signs of having asthma at all! **No allergies from the spring time weather, no wheezing or coughing just two small boys full of energy and life.** Now it's been over 6 months and they are doing better than ever done before. Don't get me wrong, EZ Breathe did not cure my boys asthma but I am thoroughly convinced that with a clean, healthy air flow in our home my boys lungs are not irritated by floating particulates that would normally cause them to become sick... and I owe that clean air to my EZ Breathe system! Thanks EZ Breathe!"*

Let us help you improve quality of life for your patients, we look forward to working with you...
