Medco Forum Presents: Priority Consult Spine Care Announces New Outcomes Module

Software Supports Rapid Patient Care Triage and Work Flow Within a Hospital-Based Spine Center or Private Surgical Practice

Long a popular choice among spine practices, Priority Consult now tracks clinical outcomes. Priority Consult was built by spine care professionals and is easily implemented; most organizations implement the new Priority Consult outcomes module with few or no additional staff.

According to Maurice Collada, M.D., neurosurgeon at Salem Spine Center in Salem, OR, his group of neurosurgeons have worked together not only to use Priority Consult to improve efficiency and patient care, but also to position Salem Spine Center to go for Joint Commission certification as a Center of Excellence. The director of a multidisciplinary, 12-person advisory council, Dr. Collada explains, "We set up the advisory council to develop algorithms that show whether we are following best practice standards. Priority Consult is the platform we have used to establish connectivity among ourselves and to launch our efforts to standardize and improve spine treatment in the community."

With a proven and customized implementation methodology, Priority Consult allows clients to:

- Start collecting data immediately
- Achieve exceptional response rates
- Reduce the operational expense of implementing an outcomes program
- Validate treatment effectiveness
- Market the quality of care
- Meet payer requirements for programs such as the Blue Cross Centers of Distinction

The software is universally available online and is applicable for any size medical facility, from large hospitals to small private practices.
